DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10 are allowed.
2. The following is an examiner's statement of reasons for allowance: Applicant's invention claims a system for feeding electrical energy into an alternating current electrical mains the mains signal is recorded and a reference signal generated. From the mains signal and the reference signal a delayed mains signal and a delayed reference signal is derived. Then, the mains signal is multiplied by the delayed reference signal and the delayed mains signal is multiplied with the reference signal. By determining a difference between the multiplied signals, a phase difference between the fundamental harmonic frequency of the mains signal and the reference signal can be derived. Making use of the phase difference, the frequency of the reference signal can be adjusted. From the reference signal a synchronization signal for synchronizing a converter is derived, the synchronization signal synchronizing electrical output alternating current energy of the converter. Thus, energy is fed into the mains by the converter in synchronism with the fundamental harmonic frequency of the mains signal. None of the cited art discloses the claimed limitation of instant application, since claims are allowed.
